AngularQUIZ

Correct Answers

1. Which of the following does TypeScript use to specify types?

Answers: `:`

Explanation: TS uses a colon (`:`) to separate the property name from the property type

2. Which of the following is NOT a type used in TypeScript?

Answers: `enum`

Explanation: `enum` is not used as a type in TypeScript

3. How can we specify properties and methods for an object in TypeScript?

Answers: **Use interfaces**

Explanation: interfaces are typically used to list the properties and methods for an object

4. How else can Array number be written in TypeScript?

Answers: `number[]`

Explanation: `number[]` is another way of writing `Array number` in TypeScript

5. In which of these does a class take parameters?
