

# Deploy Application on Cloud

## Writeup

### GitHub:

[https://github.com/Bikki084/Java\\_FSD\\_All\\_Projects/tree/master/Phase\\_5/practice\\_projects/practice\\_project\\_3](https://github.com/Bikki084/Java_FSD_All_Projects/tree/master/Phase_5/practice_projects/practice_project_3)

### DESCRIPTION

#### Project objective:

As a developer, deploy your Spring Boot application on Cloud.

#### Background of the problem statement:

You have been assigned a new task during the sprint planning. You have been asked to deploy your Spring Boot application on the Cloud. You need to create and launch an instance, provide all the required privileges, and run your application.

#### The following used:

- Cloud: AWS

**Following requirements have met:**

- A few of the source codes will be tracked on GitHub repositories. Documented the tracked files which are ignored during the final push to the GitHub repository.
- The submission of the GitHub repository link is done. In order to track the task, shared the link of the repository in the document.
- The step-by-step process involved in completing this task have been documented.
